**Coding session 2 - Improving pyEdge**

Nicola Romanò - nicola.romano@ed.ac.uk

In this session we will build a user interface for pyEdge.

We will start with a simple command line interface, and then we will build a graphical user interface using the PySimpleGUI library.

The code for this session is available on GitHub `https://github.com/BIA4-course/pyEdge`. Please note that I have added two new branches: `cli` and `gui`, so that you have access to the code for the command line interface and the graphical user interface.
